Due to a computational mistake, the numerical value of the asymptotic constant D_3 for the 2^3P state should be changed in the fourth significant digit, which leads to a correction in the Bethe logarithm correction E_{L3} . Specifically, the result for the D_3 constant for the 2^3P state in

Table I should read 1 121.202 870 92 (12). The corrected result for the E_{L3} correction for the 2^3P state in Table I is -1045.271 (8). The result for the total Bethe logarithm correction given in the text in the first paragraph of Sec. V should read $E_L = -4.9665$ (15) MHz.
